EXPERIENCE

Web-Application

Building on Angular-9, it's a project that can be used in origination to build an asset, create activity, work order & much more which can be handled by admin, manager, supervisor, technicians, etc., in which currently building the dashboard where I have to show different API data's in form of different graphs.

Travelling Project

Angular-8 Project (Rest API), where my responsibility was to achieve the flow for Reservation of Seat in Bus i.e. the user selects his desired starting & ending points, upon this show the particular available buses between those two points, then he selects the desired bus from the fetched list and then according to the selected bus show the required sitting pattern for that selected bus (includes ladies sit, physically handicap, etc. depends upon type of bus) after selecting the number of seats user goes to the payment page where calculation (taxes and ticket amount) are done.

Roadshow Project

Angular-7 (Rest API), to build a Responsive UI Design with multiple pages which consist of location page, a form consists of details of the event to be conducted then the confirmation page with all details showing and a user page to show all the information about his event booked in past present & coming future. The event is booked by the user on click of submitting sending the data to the server, and when the user wishes to his booking anytime, he can go to his account login and get the information about his events and if he wants to edit something or cancel the booked event he can do.

Websites

- Build an Astrologer responsive website using HTML5, CSS3, JavaScript, Bootstrap, jQuery, where the user comes to get information about his/her zodiac signs, numerology, bond with their partners and much more.
- Build End-to-End Responsive Website for a company using Angular-8, Angular-Material & for responsive used fxFlex concept, where client requirement was to show the complete brief information about their product & the events they organize and much more, it consists of 5 pages. The Mobile-first concept was applied.

ANKIT GUPTA
UI DEVELOPER

- Build an E-Commerce Website using Angular-8, JavaScript, Angular-Material & fxFlex, it was a website for animals that sells products for only dogs and cats. In this project, my responsibility was to build a responsive design(as approved from the client), where I have to show the required data(rest API) with the functionality as flow i.e. user visits the page where he has an option for dog and cat after choosing, they can visit particular page & can select their required product or products and add to cart, going on cart show the calculated value and there they do payments.
